

Production in ClCD-s organic Garden Farm March-September 2021

Ducks & Chicken

The total egg production from 6th March - 25th September:

2569 eggs: 1938 chicken eggs and 631 ducks eggs.

The average number of eggs per day is 13 in total: 10 chicken eggs and 3 ducks eggs.

Right now we have 20 egg layers, 5 roosters and 6 ducks.

Our garden production

Tomatoes

We have 24 tomato plants of different kinds in the greenhouse: Best of All, Sweet Grape and Striped Darby.

The total production until 25th September: 28 kg.

Cucumbers

We had 9 cucumber plants , but after a fungus infection last month we now have only 3.
The total production until 25th September: 35 kg.

French beans

Out of + 30 French beans planted now we have less than 20 plants, due to recent infection in the garden.

We managed to save some of them and fortunately they are producing again!

The total production until 25th September: 30 kg.

Broad-beans

Thanks to a friend, we had a small production of broad-beans this year. But unfortunately most of the plants died.

Our total production: 7,5 kg

Courgettes

We have 5 courgette plants in our garden. They were attacked by slugs at the beginning but thanks to the traps we put, we have had a steady weekly production of courgettes.

Our total production until 25th September: 78 kg.

Carrots

As a test, we added sand to our very rich soil in one of the raised beds. We hoped it would have a positive effect on the carrots growth.

We planted one bed with + 40 carrots plants.

And it worked! We got a much better result than last year, the total production was 3,5 kg.

Peas

Due to the infection that affected various plants in the garden , we lost all of our pea plants.

Our total production was 3 kg.

Potatoes

We managed to harvest an estimated 2 tons of potatoes during 4 days with 5 people!

Based on what we harvested last year, and how much of the potatoes were good and how many damaged or eaten by pests, we think we will have around 1,5 tons for our consumption.

Corn

We harvested until now 11 cobs of corn from the plants that were sowed earlier in the green house.

Now we are waiting to harvest from the plants that we planted directly outdoors – hopefully they will be ready next week.

Shark fin melon

With only two plants, we have collected until now 6 big beautiful Shark fin melons!

Other organic produce

- We harvested 3 big pumpkins from one plant that grow alone in one of the beds
- We collected 3 uchiki kuri squash - with at least 4 more to come!
- We have also produced a lot of:
artichoks, garlic, mynte, chamomill, parsley, oregano, coriander, rosemary, plums, apples, figs (!), blackberries, strawberries, raspberries....
